Oct 28, 2014

Subject: We need stronger chemical security - comment on EPA-HQ-OEM-2014-0328

Dear EPA Administrator,

Please follow your own mandate to pay attention to our environment and the safety of all Americans by requiring chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible.

Recent chemical explosions, fires, and spills in Texas, Louisiana, West Virginia, and other locations make it clear that chemical accidents can and do happen. The more toxic the chemicals involved, and the closer they are to waterways or population centers, the more humans and other creatures are harmed.

Please make regulations as strong as you can for encouraging industries to use less toxic substitutes whenever such are available.

Sincerely,  
Marty Grundy

Dear EPA Administrator,

As you know, recent chemical explosions, fires and spills in Texas, Louisiana, West Virginia and other locales have rightly scared pretty much all of us. As our paid and appointed representative, these things should scare you, too.

Please stand up for all of us. The decently-managed safety of all Americans requires chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible.

No matter where you come from or where you might next be hired, this is your time to bear true witness and to protect the American citizenry.

Sincerely,  
Maribeth Hulsey

Dear EPA Administrator,

Recent chemical explosions, fires and spills in Texas, Louisiana, West Virginia and other locales make one thing abundantly clear: chemical accidents can and do happen.

I live in a community with multiple refineries. There is a chemical storage area that is considered a major community issue. It's not just the concern about an explosion. The company doesn't seem to have insurance against the damage that could result, other than damage to their own property.

Please stand up for the safety of all Americans by requiring chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible.

Sincerely,  
Mary Stewart

Dear EPA Administrator,

Recent chemical explosions, fires and spills in Texas, Louisiana, West Virginia and other locales make one thing abundantly clear: chemical accidents can and do happen.

I lived in Richmond when the Chevron plant exploded and put 15,000 innocent citizens in the hospital because you didn't adequately supervise or regulate Chevron so I know the cost of not adequately safeguarding the citizens over the profit of the corporate structure. REGULATE THE HELL OUT OF THEM.

Please stand up for the safety of all Americans by requiring chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible. Without regard to the cost to the corporate power brokers. Profit DOES NOT TRUMP citizen safety.

Sincerely,  
Pete Wilson

Companies do not want to be regulated by federal or local government. however, left alone, they do not take into consideration, nor do they care, about the health and safety of people who live nearby. They also do not want to be hampered by preventing destruction of the local ecological environment through their operations. There has to be restriction on manufacturing processes to safegaurd the local population. Companies do not own the air we breathe, the earth, or the forests, rivers and lakes that they willing without concern ruin "because it si the 'cheaper' option."

Sincerely,  
Marvin Makinen

Subject: We need stronger chemical security - comment on EPA-HQ-OEM-2014-0328

Dear EPA Administrator,

Recent chemical explosions, fires and spills in Texas, Louisiana, West Virginia and other locales make one thing abundantly clear: chemical accidents can and do happen.

Please stand up for the safety of all Americans by requiring chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible.

Sincerely,  
Linda Schermer

Subject: We need stronger chemical security - comment on EPA-HQ-OEM-2014-0328

Dear EPA Administrator,

Recent chemical explosions, fires and spills in Texas, Louisiana, West Virginia and other locales make one thing abundantly clear: chemical accidents can and do happen.

Please stand up for the safety of all Americans by requiring chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible.

WE AWAIT YOUR REPLY!!

Sincerely,  
Frank And Janet Loudin

Dear EPA Administrator,

Recent chemical explosions, fires and spills in Texas, Louisiana, West Virginia and other locales make one thing abundantly clear: chemical accidents can and do happen.

Please stand up for the safety of all Americans by requiring chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible.

Sincerely,  
Sarah Miller

Oct 28, 2014

Subject: We need stronger chemical security - comment on EPA-HQ-OEM-2014-0328

Dear EPA Administrator,

I retired 10 year ago from working in Industrial Security for the DoD. The major block at that time to protecting our classified material in the hands of industry was that upper management did not want to spend the \$\$ to protect our secrets as required. We could make them comply because they did not want to lose their classified contracts. I would guess profit still outweighs risk in the blind eyes of the chemical industry. Recent chemical explosions, fires and spills in Texas, Louisiana, West Virginia and other locales make one thing abundantly clear: chemical accidents can and do happen.

Please stand up for the safety of all Americans require chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives!

The EPA Employees have a job supported with our taxes because the agency was created to protect us by controlling the polluters. EPA should keep us informed of all the road blocks they confront when they try to do their Jobs. Maybe if it was made public the people would help them in their endeavor. I doubt any members of families affected would turn their backs and not help those employees. Transparency is the best ally of democracy.

Sincerely,  
Graciela Huth

Subject: We need stronger chemical security - comment on EPA-HQ-OEM-2014-0328

Dear EPA Administrator,

Recent chemical explosions, fires and spills in Texas, Louisiana, West Virginia and other locales make one thing abundantly clear: chemical accidents can and do happen.

Please stand up for the safety of all Americans by requiring chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible.

After toxic chemicals leaked into the water source, thousands of people learned that they had been exposed. All companies that have toxic chemicals in storage, must notify regulatory agencies of their existence. Inspections and plans for disaster intervention will help in keeping our water, air and soil safe for everyone. In addition, adequate liability insurance will help those injured by these toxic chemicals. The plant in Texas had virtually no insurance - good for business but bad for those that lost everything.

Sincerely,  
Pat Bennington

Oct 29, 2014

Subject: We need stronger chemical security - comment on EPA-HQ-OEM-2014-0328

Dear EPA Administrator,

When I was in college, and before I went to law school, I took courses in biology, zoology, chemistry, organic chemistry and genetics. In law school I was taught that the role of the government was to protect the public, and governmental agencies acted to protect the public based on scientific study, taking into account the desires of the public. I quickly learned how wrong I was. The role of government appears to be to take taxpayer monies and use them to support private businesses.

Recent chemical explosions, fires and spills in Texas, Louisiana, West Virginia and other locales make one thing abundantly clear: chemical accidents can and do happen. The government knows this and does little or nothing about it. Chemical companies appear to be free to do whatever they want, and in many instances, taxpayers are left to clean up the messes.

Please stand up for the safety of all Americans by requiring chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible. Or, perhaps we should consider changing the name of the country to "The United Corporations of America" and be honest about it.

Sincerely,  
Cheryl Mitchell

Oct 29, 2014

Subject: We need stronger chemical security - comment on EPA-HQ-OEM-2014-0328

Dear EPA Administrator,

Recent chemical explosions, fires and spills in Texas, Louisiana, West Virginia and other locales make one thing abundantly clear: chemical accidents can and do happen.

Please stand up for the safety of all Americans by requiring chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible.

There is a long term financial advantage to review all process and use safer, non-toxic chemicals. Just because someone started doing something one way, it doesn't mean you have to keep to doing it the same way. A re-think usually always produces a better result.

Sincerely,  
Roger Osborne

Accept the physical reality within which we live, destruction of the different ecologies will destroy our capacity to survive. Scientists are not making it up, regardless of your fundraising priorities, that the fungibility of the planet's life sustaining biome, is not endlessly regenerative. Waste and destruction will have impacts on contained biological systems (i.e., oceans). There are actual physical limits on carrying capacities. Accept reality.

Please stand up for the safety of all Americans by requiring chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible.

Sincerely,

Oct 29, 2014

Subject: We need stronger chemical security - comment on EPA-HQ-OEM-2014-0328

Dear EPA Administrator,

Eco-terrorism happens for a variety of reasons, at different levels, and thanks to the direct or indirect contributions of many kinds of people.

In other words, American reliance on pollutants is not only a proven threat to those who misunderstand or don't know how to safely use them, but as well an accessible danger in the hands of those who have been incited to hurt the United States from within.

Accidents happen in any case. Safety is never guaranteed. But common sense regarding chemical security is an obvious necessity at this dangerous point in industrial history. And as far as alternatives - well, new infrastructures based on truly healing innovations, ethics, subtle processes, and technologies is clearly beyond the purview of the old antiquated majority of decision makers.

Sincerely,  
John Savlove

Oct 29, 2014

Subject: We need stronger chemical security - comment on EPA-HQ-OEM-2014-0328

Dear EPA Administrator,

Recent chemical explosions, fires and spills in Texas, Louisiana, West Virginia and other locales make one thing abundantly clear: chemical accidents can and do happen.

We would be crazy as a society to act as if there are no dangerous chemicals so they don't need to be properly regulated and even replaced with less harmful alternatives as they become available. The quality of life in this country depends on it. No amount of money replaces good health, and good health cannot always be restored once it is lost. We need to be smart about this before another accident happens and people are hurt or lives are lost. We have been relatively lucky up to this point.

Please stand up for the safety of all Americans by requiring chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible.

Sincerely,  
Brett Robert

Subject: We need stronger chemical security - comment on EPA-HQ-OEM-2014-0328

Dear EPA Administrator,

Recent chemical explosions, fires and spills in Texas, Louisiana, West Virginia and other locales make one thing abundantly clear: chemical accidents can and do happen.

Please stand up for the safety of all Americans by requiring chemical plants and facilities to switch to safer, less-toxic or non-toxic alternatives where feasible.

Sincerely,  
Richard Alexander
